DETAILED ACTION

1. This office action is in response to the amendment of September 9, 2009.
2. The examiner acknowledges that claims 8 and 17 have been canceled.

Allowable Subject Matter

3. Claims 1, 4-7, 9, 13-15, 17, 19, 20, 22-24, and 25-29 are allowed.
4. The following is an examiner's statement of reasons for allowance: the prior art does not teach the limitations for compressor including a motor unit, a compressor unit, a crankshaft including a centrifugal pump on a lower section, a pair of functionally independent spiral pumps, a pair of functionally independent vertical holes having lower ends connected to the spiral pumps and upper ends opening into a container through an uppermost end of a crankshaft, a throttle section for the centrifugal pump, and a hollow cylinder extending upward from the lower end of the crankshaft, and wherein the crankshaft comprises an eccentric shaft and a main shaft under the eccentric shaft; in combination with a crankshaft having vent hole provided at an upper section of said hollow cylinder and formed of a first part and a second part, wherein the first part extends upwardly along said rotation axis of said crankshaft from an off-center position with respect to said rotation axis of said crankshaft at an upper section of said hollow cylinder, and the second part extends from an upper end of said first part to an upper opening that opens into said container and is located at an upper end of said main-shaft section.

The closest prior art of Park et al. US 7,100,743 teaches many of the limitations claimed including a centrifugal pump (as embodied in figure 15), a pair of functionally

independent spiral pumps 343(a, b), a pair of functionally independent vertical holes 344a having lower ends connected to the spiral pumps 343(a, b) and upper ends opening into a container through a crankshaft 300, and a vent hole 347. Park does not teach the specific structural limitation of a vent hole that has first and second parts wherein the first part extends upwardly along said rotation axis of said crankshaft from an off-center position with respect to said rotation axis of said crankshaft at an upper section of said hollow cylinder, and the second part extends from an upper end of said first part to an upper opening that opens into said container.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
